Remote Desktop Access Platform

CASE STUDY

# CineSys and Leostream Enable Hybrid Work for Republic Creative Studios

## CUSTOMER PROFILE

Republic Creative Studios is a bold collective of artistic adventurers driven to push creative boundaries. Through craftsmanship and collaboration, the studios forge ideas into passionate journeys full of wit, inspiration, intellect and art.

The studios operates three distinct, fully integrated creative units: Republic Productions, Republic Editorial, and Republic Design. The company specializes in delivering short-form advertising content featuring motion design, VFX, editorial, and audio. Their expertise spans multiple media platforms, including television, social media, and physical installations. Republic's notable clients include McDonald's, Dr. Pepper, Frito Lay, Converse, Lenovo, and Dolce & Gabbana.

Republic Creative Studios, a Dallas-based collective of production, editorial, and design studios, successfully implemented the Leostream® Remote Desktop Access Platform to support a hybrid work environment. With the assistance of CineSys, a leading broadcast and media systems integrator, Republic's team of editors, designers, and artists can now seamlessly access high-performance workstations and creative tools—whether on-premise or remote.

## Challenges

Republic Creative Studios needed a robust hybrid work solution to support:

- High-performance, graphics-intensive workloads for editors, designers, and animators.
- Persistent and secure access to on-premise and cloud-based workstations.
- A seamless workflow for transitioning between in-office and remote environments.

To address these requirements, Republic turned to CineSys for a cutting-edge solution.

## Solution Implementation

CineSys designed a tailored IT infrastructure leveraging the Leostream Remote Desktop Access Platform. The platform provides centralized resource management that enables Republic's team to access both on-premise and cloud-based resources securely. It also enables persistent workflows that allows users to start projects in-office and continue them remotely without disruption. Additionally, high-performance remote access allows Leostream to integrate with display protocols like Mechdyne TGX and PCoIP, ensuring low-latency, high-resolution performance for tasks such as 4K video editing, color grading, and VFX production. Key features of the Leostream Remote Desktop Access Platform include secure access via zero-trust authentication and authorization, the elimination of traditional VPNs using Leostream's ultra-efficient gateway, and compatibility with specialty applications and large files common in media and entertainment workflows.

*"Leostream offers an ideal enterprise-class system tailored to our hybrid work environment that is low latency and provides high-resolution performance. With centralized access to our creative tools, our team is more productive than ever,"* said Jason Vigue, Senior Motion Graphics/VFX Artist at Republic.

## Results

The implementation of Leostream and CineSys's infrastructure delivered significant benefits for Republic:

- **Increased Productivity:** Editors and designers experienced uninterrupted access to their projects, boosting overall efficiency.
- **Enhanced Flexibility:** The hybrid work environment allows team members to work seamlessly from the office or remotely.
- **Quick Deployment:** The solution was implemented swiftly, minimizing downtime and ensuring continuity of operations.

Karen Gondoly, CEO of Leostream, highlighted the significance of the partnership: *"Modern content like that at Republic pairs art and technology in new and effective ways. We are proud to support these production studios with a platform that enables remote and hybrid teams to work together securely and productively."*

CineSys also played a pivotal role in the project's success. *"Our deep expertise in media and entertainment IT solutions allowed us to implement a system that maximizes Republic's creative capabilities,"* said a CineSys representative.

## About Leostream

Leostream's Remote Desktop Access Platform is the result of over 20 years of research and development, offering comprehensive connection management for VDI, hybrid cloud, and high-performance environments. Its secure, flexible architecture enables enterprises to maintain productivity while controlling costs and ensuring security.

## About CineSys

LLCCineSys specializes in providing IT solutions and support for digital content creators across North America. Their engineering expertise helps customers optimize workflows, strengthen infrastructures, and maximize technology investments.
